

E. Vocabulary from the passage: Match the under Column 'A' with their contextual meanings under Column 'B'. (1 point each)

A

B

- _____ 1. reveals
- _____ 2. confessed
- _____ 3. impression
- _____ 4. convicted
- _____ 5. commit

- A. admitted committing crime
- B. makes (something) known or shows
- C. effect or influence on one's feeling or mind
- D. carry out or perpetrate
- E. declared guilty of a criminal offence
- F. denied

Part II: Grammar (10%)

A. Complete each of the blank spaces in the following text with the correct form of the verb in the parenthesis (present perfect or simple past). (0.5 mark each)

Skyscrapers or tall buildings, with their tips sometimes hidden in the clouds, 1 _____ (become) the symbol of twenty-first century urban civilization. Cities 2 _____ (not always have) skyscrapers, but it is now almost a century and a half since the first skyscrapers 3 _____ (begin) to distinguish their skylines.

The first skyscrapers 4 _____ (be) developed in Chicago, U.S.A. in the late nineteenth century. At that time, Chicago 5 _____ (be) at the centre of the new American adventure, and the new adventure was the West. Chicago was the point at which the West 6 _____ (begin).

In the year 1871, a large part of booming Chicago was destroyed as a major fire 7 _____ (burn) down much of the city centre. The fire, however, 8 _____ (be) a great stimulus to architects: not only did it show them the need to design modern buildings that would not be liable to burn very rapidly, but it also 9 _____ (give) them plenty of opportunities to put their new theories into practice. Today, skyscrapers are a means of getting more space, particularly for cities that cannot be easily expanded horizontally. Thus, since the

Second World War in particular, skyscrapers 10 _____ (spread) in all the world's big cities; and they keep getting higher and higher.

B Complete the following dialogue with the correct conditional forms of the verbs in the parentheses. (0.5 mark each)

Temesgen: I need a good digital camera to take pictures urgently. My friend told me that SONY 550 is a good one.

Shop Assistant: We don't have any right now but if you are in such a hurry, it 11 _____ (be) difficult to find that model in a small shop like this. Why don't you go to the new technology shop in the shopping centre in the town?

Temesgen: Well, if I 12 _____ (go) to a specialized shop, the camera 13 _____ (be) more expensive and I 14 _____ (have) to save more money.

Shop Assistant: If I 15 _____ (be) you, I 16 _____ (go) to the auctions on the internet. Some people say it is cheaper.

Temesgen: How can I buy a camera there?

Shop Assistant: If I 17 _____ (know) how, I 18 _____ (tell) you, but unfortunately I don't.

Temesgen: Thanks anyway. What a pity! If I 19 _____ (know) digital cameras are better to buy on the internet, I (20) _____ (not waste) my time coming to town.

Part III. Vocabulary from the Course Module (15%)

A. Complete each of the following sentences with the most appropriate word given in the box below. (1 mark each)

/lauded	/ initiative	/ routine	/ stick	/distraction	/ verbatim
/debut	/ culminated	/ coveted	/ transient	/alleviate	/ linchpin

1. Social media has increasingly become the major _____ that takes most people's attentions from their work.

2. The meeting was so _____ that we all started our work as per the schedule.

1. The teachers had to _____ to the class and explained that even if it means
not all of their students leave with diplomas, they have to fulfill their
duty of our boys and girls up _____ education and that we have to take it
carry out additional tasks.
5. He has read the book multiple times and he does come to remember quite well
_____.
6. The local government has developed new projects to _____ drinking of
drinking water, which has been a source of danger among the people in the area.
7. I was very delighted to attend the ceremony that was held in _____ the
film, marking the new beginning of professional life.
8. The negotiations that went on for months between labor and management of employees
eventually _____ to an amicable agreement that was _____
_____ as a breakthrough.
10. The manager gave a certificate of recognition to the employee who took the
_____ to introduce an innovative way of working for quality of the
products of the factory.

11. Match the words under column A with the definitions under column B. Write your
answers in the spaces provided.

A. Words

- E 1. endeavor
C 2. ostracized
B 3. repertoire
D 4. norms
A 5. elated

B. Definitions

- a. A very happy
b. repelling collection
c. not allowed to join a group
d. Behaviors shared by all
e. strong feeling
f. dangerous

or not stored properly. As a result of this study, Governor Ryan decided, in 2003, to set free four more prisoners and changed the sentences of 167 others from death to life imprisonment.

8. The use of DNA in criminal cases is still being debated around the world. Some fear that governments will one day keep records of everyone's DNA, which could put limits on the privacy and freedom of citizens. Other people mistrust the science of DNA testing and think that lawyers use it to get their clients free whether or not they are guilty. But for those whose innocence has been proven and who are now free men, DNA testing has meant nothing less than a return to life. And with the careful use of DNA testing, no innocent person should ever be convicted again.

(Source: *Advanced Reading Power*, 2007, P., 260)

A. Choose the best answer for each of the following questions. (0.5 point each)

1. DNA testing was first used by...

- a. a lawyer in New York.
- c. doctors in the United States.

- b. students in Illinois.
- d. police in Great Britain.

2. In the 1980s in the United States...

- a. DNA testing was often used in criminal cases.
- b. many people were unfairly sentenced.
- c. some judges refused to give the death sentence.
- d. most prison inmates were innocent of crimes.

3. The Innocence Project uses DNA testing to...

- a. help the police put people in prison.
- c. prove that suspects are guilty.

- b. find out which lawyers are incompetent.
- d. set free innocent prisoners.

4. Students in Illinois...

- a. proved that some prisoners were not guilty of crimes.
- b. believed that some suspects were from minority backgrounds.

- c. told the governor of Illinois not to set prisoners free.
- d. showed that DNA testing did not always help prisoners.

5. You can infer from this passage that some students in the United States...
- a. prefer to study economics or business.
 - b. care about social and legal justice.
 - c. have been unfairly convicted of crimes.
 - d. wish to become famous lawyers.

6. Choose the statement that best expresses the overall thesis of this passage.
- a. DNA testing has had important effects on the legal system.
 - b. DNA testing has helped innocent men go free in Illinois.
 - c. DNA testing has shown who was guilty of a crime.
 - d. DNA testing uses genetics to identify a person.

B. Decide whether the following statements are true or false. (0.5 point each)

- _____ 1. Before the DNA testing, the suspect in Great Britain said he was innocent.
- _____ 2. Juries in America are never influenced by the racial or ethnic background of the suspect.
- _____ 3. Despite its contribution, there are some who doubt the credibility of using DNA testing in criminal investigations.
- _____ 4. The results of the 1985 DNA tests in Great Britain were the expected ones.

C. Reference Questions: What do the following refer to in the passage? (1 point each)

- 1. 'which' in Para 2, line 5 _____
- 2. 'where' in Para 3, line 1 _____
- 3. 'at that time' in Para 4, line 2 _____
- 4. 'these men' in Para 5, line 6 _____
- 5. 'this study' in Para 7, line 5 _____

Reading Comprehension (15 marks)

Read the following passage and answer the questions that follow it.

@alluexams

DNA testing

1. Genetics is one of the most exciting scientific fields of our day. Researchers in many areas of science are finding ways of applying the tools of genetics, and in medicine it has opened doors to dramatic new possibilities for the prevention and treatment of many kinds of disease—from depression to diabetes and Alzheimer's. With the invention of DNA testing, genetics has also had a real impact in a very different field—criminal law.

2. DNA testing **reveals** the genes of each individual person. Since the early twentieth century, scientists have known that all human characteristics—from eye color to body height to certain diseases—are contained in a person's genes and are passed from parents to children. Genes work as a chemical instruction manual for each part and each function of the body. Their basic chemical element is called DNA, a copy of **which** can be found in every cell. The existence of genes and the chemical structure of DNA were understood by the mid-1900s, but scientists have only recently been able to identify a person from just a drop of blood or saliva or a single hair.

3. One of the most important uses of DNA testing is in criminal investigation, where it provides evidence that helps to prove that some crime suspects are guilty or others are innocent. The very first use of DNA testing in a criminal case was in 1985 in Great Britain, when a man **confessed** to killing a young woman in the English countryside. Because police had found samples of the killer's DNA at the scene of the crime, a biologist suggested that it might be possible to compare that DNA to some from the confessor's blood. To everyone's surprise, the tests showed that he was not the killer. Nor was he guilty of a similar murder that had happened some time earlier. At that point he admitted that he had confessed to the crimes out of fear and police pressure. The police then asked 5,000 local men for samples of their blood, and DNA testing revealed that one of them was the real murderer, so the first man was set free.

4. The successful conclusion of this case in England made a big **impression** on lawyers and police around the globe, especially in the United States. Studies **at that time** showed that

perhaps 3 percent of U.S. prison inmates were in fact innocent of the crimes they had been accused of. That added up to almost 10,000 people. Some, like the man in England, had been pushed to confess to crimes they had not committed. Others had never had a chance to defend themselves in court because of incompetent lawyers. Still others had been convicted on false evidence given by dishonest police officers who wanted to have someone to put in jail.

2. In 1993, two law professors, Peter Mendel and Barry Schuck, decided to use DNA evidence to help set free such mistakenly convicted prisoners. With the help of their students, they created a non-for-profit organization called the Innocence Project, which is still operating. Most of their clients are poor men, many from racial and ethnic minorities. In fact, studies have shown that U.S. judges and juries are often influenced by racial and ethnic backgrounds, and that people from minority groups are more likely to be convicted. Some of these men had been sentenced to death, a form of punishment used in thirty-eight states out of fifty (as of 2006). For most of these prisoners, their only hope was another trial in which DNA testing could be used to prove their innocence.

Between 1993 and 2006, the Innocence Project helped free 106 men. Some of these prisoners had been in jail for ten, twenty years or more for crimes they did not commit. However, the goal of the Innocence Project is not simply to set free those who are wrongfully in jail. They also hope to bring about real changes in the criminal justice system. In Illinois in the late 1990s, a group of journalism students at Northwestern University were able to bring about such a change in that state. They began investigating some Illinois prisoners who claimed to be innocent. Through DNA testing, the students were able to prove that in fact the prisoners were not guilty of the crimes they had been accused of. Thirteen of these men were set free, and in 2000, Governor Ryan of Illinois decided to stop carrying out death sentences until further study could be made of the prisoners' cases.

3. In a study by the Northwestern students and government officials, many serious problems were revealed in the legal system. Police officers had been violent and forced suspects to confess, or they had lied about evidence in court. The reliability of witnesses had not been properly checked, and physical evidence that might have helped the innocent men had been thrown out
