Communicative English Language Skills II (FLEN 1012) Mid-exam

Weight= 30%

Time allowed: 1:30 hrs

Name [redacted] ID.No 150750 Section SS

Instructor's Name _____

General Directions:

Before you start answering any of the questions of each part:

- Write the necessary information on the cover page and the answer sheet
- Make sure that this *exam* has six sub-parts (I—VI).
- Check that the exam has 5 pages.
- Switch off your cell phones (Mobile phones) before the exam begins.
- Beware that any form of cheating is strictly forbidden.

Good Luck!

all are done by God

Read the Following Text and Answer the Questions that Follow.

International Migration: Causes and Effects

- 1 Migration is a relatively permanent movement of people from one place to another with the intentions of settling to a new location. This phenomenon is one of the defining features of our modern time, manifesting in different forms. It can be internal migration where a large mass of people leaving their residence within national boundaries, or it may be international migration in which people cross national borders. Irrespective of the type, there is always a driving force behind migration. Also, migration is one of the major social phenomena affecting individuals, communities and states in varying ways. This short article briefly presents the causes and effects of international migration with policy recommendations for states.
- 2 The factors that lead people to migrate, voluntarily or involuntarily, permanently or temporarily, include economic, demographic, environmental, social and political reasons. People may migrate to access better economic, employment and educational opportunities for themselves and their families. Some migrate due to lack of access to fundamental human rights such as health, food or basic education, and due to discrimination, poverty or separation from family. They may move in response to crisis – both natural and manmade – and, increasingly, in response to environmental changes.
- 3 Drivers regarding security are usually of the highest importance in people's decision to migrate, sometimes representing a matter of life and death. Persecution and discrimination based on nationality, race, religion, political beliefs or belonging to a social group often causes people to move to other safer areas. The danger can be created by the activities of criminal groups or by war. Many European countries register every year thousands of asylum seekers who flee their home state for brutal persecution. These individuals are granted protection by a destination state against any form of persecution and harassment from the home state or an extension of its hands.
- 4 Economic factors are the second most important category of drivers causing international migration. Most often, a large number of people emigrate due to unemployment, underdevelopment, unfavorable economic conditions and lack of career prospects. At the same time, in developing countries, technology and mechanization in the agricultural sector significantly reduce the need for labor in rural areas. Hence, the population has no alternative sources of income. Such a context is a common phenomenon of Romania, which, due to its fresh accession to the European Union, has become an important source of migrants for the western countries. The migrants go where the jobs are, incurring no cost for the destination state. In most cases, migrants take jobs which nationals from the destination state are reluctant to do and governments are unwilling to regulate properly.
- 5 The third categories of drivers come under Environmental factors. The factors can be broadly classified into (1) climate factors such as drought, floods, storms and extreme temperature and (2) non-climate related disasters (e.g. earthquakes and nuclear disasters). Both category of factors directly and

indirectly impact the resilience and vulnerability of individuals, households and communities, and may lead to migration. How climate change drives migration depends heavily on its interaction with other factors, including the perception of risk by affected communities, and varies among and within communities. Studies in Africa and Asia show that most people displaced by disasters are optimistic about the future and remain within their own countries. They devise temporary mechanisms as a recovery from the damages sustained. Yet others are pessimistic about future trends. Thinking no improvement, they cross national borders to find better livelihood through their moves.

6 In recent times these causes are becoming more complex, increasing the magnitude and forms of international migration. More than at any previous point in human history, revolutions in transportation and communications have increased both the awareness and access to opportunities abroad. Today's instantaneous flow of communications between potential migrants and friends, families and diaspora communities – as well as with migrant smugglers and unscrupulous labor recruiters – are some of the most powerful enablers of international migration.

7 Now we turn to the effects of all this on individuals, communities and states. Evidences show that migration is a mixed blessing. Firstly, the economic effects are largely positive. Migrants generate better income in destination countries from which they send back in remittance to their home states. As a result, the GDP per capita in the home state increases and unemployment decreases, particularly in households receiving the remittance directly. This improvement of the economic situation also has a positive effect on public finances. As public expenditures increase, so do revenues from taxes and contributions.

8 While these immediate benefits are visible, migration entails several adverse effects which largely outweigh the benefits coming through the remittance. Among others, home countries lose a considerable number of skilled manpower as emigrants. This phenomenon, widely known as brain drain, depletes the human capital stock of the poor countries, which in turn damages their prospects for economic development. A huge number of senior medical practitioners, engineers, university professor and other professionals leave African and Asian countries for better job pay in western countries. That causes huge deficit to the work force stock of home state which are mostly poor countries. Conversely, destination countries benefit from this phenomenon. Their economy utilizes the talents, knowledge and skills of this work force without incurring any marginal cost for educating them. Also, because of the abundance of the skilled manpower immigrating into these countries, they have the chance to choose the best ones for their job posts.

9 These adverse effects of migration, along with the causes outlined in this paper, are subjects of policy debate at global and national levels. The contents of the debate suggest that it requires practical actions that contain the flock of migrants from developing countries. Particularly, governments of in home countries need to take to avoid drivers of migration in all its manifestations. Also, these countries need to formulate a long term strategy to engage their citizens in sustainable development activities. Finally, developed countries are morally responsible to help developing countries in such effort.

1. Choose the best options for the following questions based on your reading of the passage (1 point each).

1. The writer in Paragraph 2 of the reading states that threat to security is the greatest reason for international migration. Which one of the following is such a threat?
 - A. Lack of quality education
 - ☒ B. Political persecution
 - C. Lack of employment
 - D. Climate change
2. Transport and communication are cited as one of the factors in migration. Which one of the following is true about these factors?
 - ☒ A. Modern communication tools get people connected to others and that helps them migrate
 - B. Only few people can access transport and communication tools useful for migration purposes
 - C. Modern transport contributed to international migration more than communication tools do.
 - D. Smugglers of migrants do not easily access communication tools.
3. What do research evidences show about the link between perception of people towards natural disasters and decisions to migrate ?
 - A. All people experiencing natural disasters tend to migrate
 - ☒ B. Most people in disaster zones think that their life conditions affected by disasters would improve in future.
 - C. Most people in disaster zones think that their life conditions affected by disasters would not improve in future and decide to migrate.
 - D. No link can be found between perception of people towards natural disasters and decisions to migrate
4. One of the major effects of international migration is brain drain. Which one of the following is not true about this phenomenon?
 - A. The damage caused by brain drain is not sufficiently compensated with the remittance sent back to home countries.
 - ☒ B. It does not benefit destination countries in any way.
 - C. It damages the educated human resources of developing countries
 - D. It is mainly caused by political instability.
5. What type of conclusion does the writer make in the last paragraph of the reading?
 - A. A summative conclusion in which he restates the major points of the reading
 - B. A projective conclusion in which he predicts about the future effects of migration.
 - C. An embedded conclusion in which he tells a personal story as a closing remark.
 - ☒ D. A reflective conclusion in which he shows lessons and insights learned from the analysis and action to be taken accordingly.

II. Based on the reading text, fill in the spaces with the required pieces of information indicated in the following table (total of 6 pts.)

6. Level of importance for category of drivers for migration	'Category of drivers' for migration (1 pt. each)	Drivers/factors for migration
First	Security	persecution - discrimination
Second	Economic factors	unemployment - underdevelopment - unfavorable economic conditions - lack of career prospects - technological mechanization, agricultural sector
Third	Environmental factors	- climate factors - non-climate related disasters

III. Below are given the contextual meaning of those words written in **bold** in the reading Passage. Provide the appropriate word for each of these meanings (1 point each).

7. given a right granted
8. more than ; greater than outweigh
9. gap ; shortage shortage
10. to leave a place flee
11. negative ; bad adverse

IV. Below are given pronouns from the reading text. Decide what these pronouns refer to (1 point each).

12. Their (paragraph 2 line 3) refers to migrants
13. Its (paragraph 5 line 5) refers to climate change
14. This (Paragraph 8 line 8) refers to migration of professionals to the western countries

V. Complete the sentences below using appropriate words from the list given (1 point each).

³ pursue ² ravage ³ abundant ⁴ dilution ⁵ innumerable ⁶ kinship

15. In many parts of Ethiopia, land ownership is transferred from person to person following a line of 6.
16. Sand is so abundant in this area that people constructing houses can easily buy for a lower price.
17. The war going on in northern Ethiopia 1 infrastructure in urban and rural areas alike.
18. In the past three years, 5 human right violations were reported in this country.

VI. Read the following text and fill in the correct forms of active or passive verbs (1 point each)

The past ten years 1 were witnessed (witness) a dramatic rise in cost of living in this country. The phenomena, which began in the eve of the Ethiopian new millennium, continue to affect millions of citizens. It 2 mainly characterizes (mainly characterize) by nonstop inflation taking the price of basic commodities beyond the purchasing power of household income. Many people today 3 spend (spend) nearly all of their income for food consumption, saving no money for other purposes. Many others can scarcely 4 feed (feed) themselves.

This challenge 5 was attributed (attribute) to many factors. Some attribute it to problems in the monetary policy of the state which 6 pumped (pump) a huge amount of paper money into the economy without a workable economic system benefiting every citizen in the country. Others, on the other hand, believe that all this inflation is caused by the slow increase in economic productivity in the country. Particularly, the latter group of people hold that the agricultural sector, which produces nearly 90% of our food consumption, 7 has not transformed (not transform) to the level it can support the fast growing population in the country. Further, the country's economy has not made a sustainable transition from agriculture to industry. This in turn is a major source of unemployment, triggering more inflation.

Name _____ A.O. _____ Section _____

Instructor's Name _____

I. Choose the best options for the following questions based on your reading of the passage (1 point each).

2 1. B 2. A 3. B 4. B 5. B

II. Based on the reading text, fill in the required pieces of information indicated in the following table. Giving as much information as presented in the text is rewarding (total of 6 pts.)

6. Level of importance for category of drivers for migration	'Category of drivers' for migration	Drivers/factors for migration
First	Security	• persecution • Discrimination 0.5
Second	• Economic factors	• unemployment • under development • unfavorable economic conditions • Lack of career prospects • Technology and mechanization in agricultural sector
Third	Environmental factors	• Climatic factors • non-climatic related disasters 0.5

$$21.5 + 2 + 0.5 = 22$$

III. Below are given the contextual meaning of those words written in bold in the reading Passage. Provide the appropriate word for each of these meanings (1 point each).

7. granted 8. outweigh 9. Standard news 10. free 11. adverse

IV. Below are given pronouns from the reading text. Decide what these pronouns refer to (1 point each).

12. Migrants ✓
13. Climate change ✓
14. Migration of professionals to the western countries from African and Asian countries.

V. Complete the sentences below using appropriate words from the list given (1 point each).

15. Kinship ✓
16. Abundant ✓
17. Pursue ✗
18. Innumerable ✓

VI. Read the following text and fill in the correct forms of 'Active or Passive' verbs (1 point each)

1. was witnessed ✓
2. was mainly characterized 0.5
3. Spends 0.5
4. Feed ✓
5. was attributed 0.5
6. has pumped 0.5
7. Not been transformed 0.5 ✗ + 0.5

Good Luck
