Chapter 1

Understanding Disability and Vulnerability

1.1. Definitions of disability and vulnerability

- Disability is not uncommon and it is part of human diversity.
- It is estimated that 15 % of the world's population has a disability, a percentage that is expected to grow because of poor health care and nutrition early in life, growing elderly populations and violent civil conflicts.
- Among the population of people with disabilities, approximately 80 % live in developing countries and are disproportionately represented among the poor.
- For instance, of the total population of Ethiopia, 17.6% are estimated to live with some sort of impairment (WHO and World Bank, 2011, p. 272).

- Understanding the concept of disability varies between cultures and evolves with in a culture over time.
- People are using the two key terms, impairments and disability interchangeably but there is a visible conceptual distinction between these terms as described below:

1.1.1. Impairment

- Impairment is the “purely factual absence of or loss of functioning in a body part.” it can be functional, psychological or physiological part of body.
- Hence, the term impairment is used to notify the physical condition of a person such as visual, physical, hearing, and intellectual disabilities.
- It may result in activity limitation based on the degree/ severity, type and onset of the impairment.

Impairment

- Impairments represent a **deviation** from certain generally accepted **population standards**.
- The presence of impairments **do not necessarily** indicate that a **disease is present** or that the individual should be regarded as sick.
- Impairments can be temporary or permanent; progressive, regressive or static; intermittent or continuous.

1.1.2. Disability

- The concept of disability is defined as “the interaction between persons with impairments and attitudinal and environmental barriers that hinders their full and effective participation in a society on an equal basis with others” (UN CRPD, 2006).
- Disability is, therefore, a negative reaction of people towards persons with impairments that results in “participation restriction.”
- Disability, as a concept is referred: as an umbrella term that include impairment, activity limitation and participation restriction.
- Hence, Article 1 of the CRPD describes persons with disabilities as “those who have long-term physical, mental, intellectual, or sensory impairments which in interaction with various barriers may hinder their full and effective participation in society on an equal basis with others.”

1.1.3. Vulnerability

- On the other hand, the term vulnerability refers to state of being exposed to the possibility of being attacked or harmed, either physically or emotionally.
- Accordingly, vulnerable groups belong to the people who are physically and emotionally hurt and attacked as a result of various forms of social injustice and malpractices.

Vulnerability is classified into four categories as described below:

A. Physical Vulnerability:

- The physical vulnerability of an area also depends on its geographic proximity to the source and origin of the disasters e.g. if an area lies near the coast lines, fault lines, unstable hills etc.

B. Economic Vulnerability:

- Economic vulnerability of a community can be assessed by determining how varied its sources of income are, the ease of access and control over means of production (e.g. farmland, livestock, irrigation, capital etc.), adequacy of economic fall back mechanisms and the availability of natural resources in the area.

C. Social Vulnerability:

- A socially vulnerable community has weak family structures, lack of leadership for decision making and conflict resolution, unequal participation in decision making, weak or no community organizations, and the one in which people are discriminated on racial, ethnic, linguistic or religious basis.

D. Attitudinal Vulnerability:

- A community which has negative attitude towards change and lacks initiative in life resultantly become more and more dependent on external support.
- This brings about disunity and individualism in the society. Thus, they become victims of conflicts, hopelessness and pessimism which reduce their capacity of coping with a disaster.

1.2. Causes of impairments and vulnerability

- The issue of disability/impairment is not yet being scientifically understood and treated by the society particularly in the low-income countries including Ethiopia.
- As a result, the cause of impairment is not appropriately comprehended due to the reason that people still believe that impairment is caused by curse, sin and wrath of God.
- However, even though some causes of impairment are unknown, scientific research conducted on the issue confirmed that the cause of impairment is classified into 2 major categories as described hereunder:

1.2.1. Biological

- Under this category of the cause of impairment, genetically induced factors are commonly known reasons.
- These include:
 - Abnormalities in genes and genetic inheritance that may cause intellectual disability, down syndrome and other multiple impairments on children.
 - Sometimes, diseases, illnesses, and over-exposure to x-rays can cause a genetic disorder.
 - Pre-term and underweight birth also may result in different forms of impairment.

1.2.2. Environmental

- The adverse effect of poverty and starvation such malnutrition, lack of access to health care and treatment etc. may cause impairment to the child during pre- and- postnatal period.
- The use of drugs, alcohol, tobacco, the exposure to certain toxic chemicals and illnesses, toxoplasmosis, cytomegalovirus, rubella and syphilis by a pregnant mother can cause intellectual and other types of disability to the child.
- Childhood diseases such as a whooping cough, measles, and chicken pox may lead to meningitis and encephalitis.
- This can cause damage to the brain of the child.
- Toxic material such as lead and mercury can damage the brain too.

- Unfortunate life accident such as drowning, car accidents, falls, landmines, war, etc. can result in people losing their sight, hearing, limbs and other vital parts of their body.
- As in the case of impairment, among several examples of causes of vulnerability, the following are the most known contributing factors to vulnerability:
 - Poor governance;
 - Poverty;
 - Discrimination;
 - Inequality and inadequate access to resource and livelihood.

1.3. Types of impairments and vulnerable groups

- Regardless of the existence of a number of types of impairments, the commonly known and major kinds of impairments are listed below.
 - 1.3.1. Visual impairment (Generic terminology for blindness and low vision)
 - 1.3.2. Hearing Impairment (Generic terminology for deafness and hard of hearing)
 - 1.3.3. Specific Learning Disability (Dyslexia, Dysgraphia, Dyscalculia)
 - 1.3.4. Speech and Language Impairments including fluency disorder
 - 1.3.5. Autism
 - 1.3.6. Emotional and Behavioral Disorders
 - 1.3.7. Intellectual Disability
 - 1.3.8. Physical /Orthopedic Impairments

1.3.9. Health related Impairments Such as:

- Heart disease;
- Cystic fibrosis(is a hereditary disease that affects the lungs and digestive system.);
- Acquired immune deficiency syndrome (AIDS);
- Hemophilia(is a rare disorder in which your blood doesn't clot normally because it lacks sufficient blood-clotting proteins (clotting factors) ;
- Asthma;
- Diabetes;
- Nephrosis & Nephritis Kidney disorders **nephrosis** is (pathology) a non-inflammatory disease of the kidneys that is characterized by the leaking of blood protein into the urine, swelling or oedema, and degenerative lesions while **nephritis** is (pathology) inflammation of the kidney. ;

- Sickle-cell anemia;
- Leukemia (is a blood cancer caused by a rise in the number of white blood cells in your body.) ;
- Lead poisoning Disorder (is a type of metal poisoning caused by lead in the body) ;
- Rheumatic fever (is a disease that can affect the heart, joints, brain, and skin) ;
- Tuberculosis;
- Cancer;
- Epilepsy;
- Leprosy

1.3.10. Multiple Impairment:

- Deaf blindness.

- Then again, children, pregnant women, elderly people, malnourished people, and people who are ill or immune-compromised, are particularly vulnerable when a disaster strikes, and take a relatively high share of the disease burden associated with emergencies (WHO, 2020).
- In general poor and socially disadvantaged people are the most known vulnerable groups throughout the world.

- The following features depict the common characteristics of the vulnerable groups stated above:
 - Less physically or mentally capable (infants, older adults, people with disabilities);
 - Fewer material and/or financial resources (low-income households, homeless);
 - Less knowledge or experience (children, illiterate, foreigners, tourists);
 - Restricted by society to grow and develop according to their needs and potentials.

1.4. Historical background of modalities moving towards inclusion

- In the post industrial period legislations and litigations created opportunities for children with disabilities to access education in public schools.
- The following modalities were applied to teach children with disabilities.

1.4.1. Specialized and or residential schools

- These schools were established with an intention to provide educational services in specialized approach only for children with disabilities.
- Consequently, schools for the deaf, schools for the blind etc. came into being as separate institutions throughout 19th and 20th century.

1.4.2. Mainstreaming

- In the 1960 and 70s special needs education classes were established in public schools with an intention to create least restrictive environment for children with disabilities.

1.4.3. Integration

- The approach was introduced and applied in 1970s with an objective to integrating students with disabilities in general class setting without the change of regular school/education system.
- In this situation, students with disabilities are required to fit the system.
- This approach is characterized by the following realities:
 - System stays the same;
 - Round pegs for round holes;
 - Change the child to fit the system;
 - Make the square peg round;
 - Child must adapt or fail.

Integration

1.4.4. Inclusive Education

- This approach was applied as of the last quarter of 20th century focusing on regular education system change to fit the special educational needs of students with disabilities as discussed in the next section in detail.
- This approach is characterized by the following factors.
 - Flexible system;
 - Children are different;
 - All children can learn: (Different abilities, Ethnic Groups, Size, Age, Background, Gender, Persons with disabilities);
 - Change the system to fit the child.

Inclusive

1.5. Evolution of the concept of disability

- In order to understand how disability is currently viewed, it is helpful to look at the way the concept of disability has evolved over time as described below.

1.5.1.Traditional/Charity Model

- Historically, disability was largely understood in mythological or religious terms, e.g. people with disabilities were considered to be possessed by devils or spirits; disability was also often seen as a punishment for past wrong doing.
- These views are still present today in many traditional societies.

1.5.2.Individual/Medical Model

- In the nineteenth and twentieth centuries, developments in science and medicine helped to create an understanding that disability has a biological or medical basis, with impairments in body function and structure being associated with different health conditions.
- This medical model views disability as a problem of the individual and is primarily focused on cure and the provision of medical care by professionals.

1.5.3.Social Model/Human Rights-Based Model

- In the 1960s and 1970s, the individual and medical view of disability was challenged and a range of social approaches were developed, e.g. the social model of disability.
- These approaches shifted attention away from the medical aspects of disability and instead focused on the social barriers and discrimination that people with disabilities face.
- Disability was redefined as a societal problem rather than an individual problem and solutions became focused on removing barriers and social change, not just medical cure.

SOCIETY

PWD

Activities

1. Read the following short story and identify the phrase that clearly shows the meaning of impairment and disability.

Ten-year-old Mesfin's eyes are damaged = _____ due to an eye disease, and he develops difficulties in seeing = _____. His school refuses to take him back as they don't have the resources to support a child with visual impairment = _____. There are no other schools in his community and therefore Mesfin cannot go to school = _____.

2. Which modality applied to teach children with disabilities isolated children with disabilities from their non disabled peers? Why?
3. What factors make inclusive education as a modality to teach children with disabilities and other vulnerable groups different from integration?
4. Who are exposed to vulnerability? Why?
5. What are the major and common characteristics of vulnerable groups?

Chapter 2

Concept of Inclusion

2.1. Definition of Inclusion

- The principle of inclusion is simple.
- It is the opposite of exclusion and also alienation.
- It is the principle that says that whatever benefits accrue to members of a society are the heritage of all people, not just those who are able-bodied.
- Inclusion means that all people are entitled to full membership of the human family.

- Fundamentally, inclusion is the principle that:
 - We are all entitled to participate fully in all aspects of society;
 - We all have the same rights and responsibilities;
 - We all have something to contribute.
- It is the principle which demands valued recognition of all people and the entitlement of all meaningful interaction, involvement and engagement in every part of the complex and multifaceted societies in which we live.

- Inclusion is the right of the individual and the responsibility of society as a whole.
- Inclusion requires the removal of barriers and social structures which impede(restrict) participation.
- It requires proactive policy making, lateral thinking and on-going commitment.

- The principle of inclusion accepts disability as human diversity. Inclusion is not a one-time project, rather it is a process which is ultimately intended to pass through or achieve the following organically linked steps or processes:
 - Developing Inclusive plan or policy/legal frameworks;
 - Developing Inclusive culture within communities and institutions; and
 - Evolving inclusive practice.

- There are three dimensions need to be considered for the effective implementation of inclusive services that accommodate the special needs of persons with disabilities and other vulnerable groups:
 - Create non-discriminatory attitude within communities towards PWDs and other vulnerable groups;
 - Develop accessible and or barrier free physical as well as service environments for equal participation of PWDs and other vulnerable groups in socio-economic activities;
 - Empower physical and psychosocial capacity of PWDs and other vulnerable groups.

- In accordance with the analysis of WHO regarding environment in reference to disability, it includes both the physical and service environments as listed briefly below:
 - Technology and product
 - Natural environment and human made change to it
 - Social support and relationships
 - Attitude
 - Policy, system and services

2.2. Principles of Inclusion

- In accordance with UNESCO (2005) the following are four major principles of inclusion:

1. **Inclusion is a process.**

It has to be seen as a never-ending search to find better ways of responding to diversity.

It is about learning how to live with difference and learning how to learn from differences.

Differences come to be seen more positively as a stimulus for fostering learning amongst children and adults.

- ❖ **2. Inclusion is concerned with the identification and removal of barriers** that hinders the development of persons with disabilities.
- ❖ It involves collecting, collating and evaluating information from a wide variety of sources in order to plan for improvements in policy and practice.
- ❖ It is about using evidence of various kinds to stimulate creativity and problem solving.

❖ **3. Inclusion is about the presence, participation and achievement of all persons.**

❖ ‘Presence’ is concerned with where persons are provided and how reliably and punctually they attend; ‘participation’ relates to the quality of their experiences and must incorporate the views of learners/and or workers and ‘achievement’ is about the outcomes of learning across the curriculum, not just test and exam results.

4. Inclusion invokes a particular emphasis on those who may be at risk of marginalization, exclusion or underachievement.

❖ This indicates the moral responsibility to ensure that those ‘at risk’ are carefully monitored, and that steps are taken to ensure their presence, participation and achievement.

5. It promotes the two dimensions of inclusion, equality and equity.

Equality is equality of equals.

Aristotle defined equality as “treating equal people equally.”

Whereas, equality refers to the provision of special support for the ones who were (are) neglected in the participation of socio-economic activities of the society they live in.

Equality

doesn't mean

Equity

2.3. Rationale for Inclusion

- The following rationales justify why inclusion is needed to be applied as a strategy to make the participation of PWDs and other vulnerable groups visible in all aspects of life of the society.

2.3.1. Educational Foundations

- Children do better academically, psychologically and socially in inclusive settings.
- A more efficient use of education resources.
- Decreases dropouts and repetitions.
- Teachers competency (knowledge, skills, collaboration, satisfaction).

2.3.2. Social Foundation

- Segregation teaches individuals to be fearful, ignorant and breeds prejudice.
- All individuals need an education that will help them develop relationships and prepare them for life in the wider community.
- Only inclusion has the potential to reduce fear and to build friendship, respect and understanding.

2.3.3. Legal Foundations

- All individuals have the right to learn and live together.
- Human being shouldn't be devalued or discriminated against by being excluded or sent away because of their disability.
- There are no legitimate reasons to separate children for their education.

2.3.4. Economic Foundation

- Inclusive education has economic benefit, both for individual and for society.
- Inclusive education is more cost-effective than the creation of special schools across the country.
- Children with disabilities go to local schools.
- Reduce wastage of repetition and dropout.
- Children with disabilities live with their family and use community infrastructure.
- It facilitates better employment and job creation opportunities for people with disabilities

2.3.5. Foundations for Building Inclusive Society

- Formation of mutual understanding and appreciation of diversity.
- Building up empathy, tolerance and cooperation.
- Promotion of sustainable development.

2.4.Features and barriers of inclusive environment

- Inclusive environment is characterized by the following features that revolve around the formation of accommodative and barrier free atmosphere.
- An inclusive environment is one in which members feel respected by and connected to one another.
- An inclusive environment is an environment that welcomes all people, regardless of their disability and other vulnerabilities.
-

Features and barriers Cont'd ...

- ❖ It recognizes and uses their skills and strengthens their abilities.
- ❖ An inclusive service environment is respectful, supportive, and equalizing.
- ❖ An inclusive environment reaches out to and includes individuals with disabilities and other vulnerable groups at all levels of services and community life.
- ❖ An inclusive environment is a place which is adjusted to individuals' needs.

Cont'd...

- ❖ It acknowledges that individual differences among individuals are a source of richness and diversity, and not a problem, and that various needs and the individual pace of learning and development can be met successfully with a wide range of flexible approaches.
- ❖ Besides, the environment should involve continuous process of changes directed towards strengthening and encouraging different ways of participation of all members of the community.

Cont'd ...

- ❖ An inclusive environment is also directed towards developing culture, policy and practice which meet pupils' diversities, towards identifying and removing obstacles in learning and participating, towards developing a suitable provision and supporting individuals.

Cont'd....

- Regardless of these positive features and qualities of inclusion in terms of the promotion of the issue of disability and vulnerability in public services, there are three types of barriers preventing persons with disabilities from participating in society on equal terms with non-disabled people:
 - Social and attitudinal barriers;
 - Environmental and technical barriers; and
 - Institutional barriers.

Social and attitudinal barriers

- Attitudinal barriers, including prejudice and discrimination cause the biggest problems to persons with disabilities.
- Disability is associated with shame, fear and/or pity, easily leading to isolation or overprotection.
- Disability is often also seen as a curse and punishment of wrong doing and wrath of God.

Cont'd...

- PWDs are assumed as incapable/inadequate and dependent upon others who deserve passion and charity.
- In order to avoid discrimination, the family may keep the person with a disability hidden at home.
- Negative language reflects and can reinforce prejudices.

Environmental and technical barriers

- Environmental barriers include natural or technical barriers that prevent persons with disabilities from participation.
- PWDs encounter these barriers in areas such as: public transport, hospitals and clinics, schools and housing, shops and marketplaces, places of worship, media and communications etc. due to the physical inaccessibility of such service areas.
- Technical barriers include high steps and concrete platforms, narrow entrances, lack of or too heavy doors, narrow cubicles, lack of light and handrails.
- Natural barriers include uneven, rough or steep paths on muddy and/or slippery ground.

Institutional barriers

- Institutional barriers are related to legislation, policies and action plans.
- Even if policies and legislation take persons with disabilities into account, the challenge is that they often lack directives, strategies and guidelines for implementation.
- In addition, the relevant ministries/ bureaus responsible may not be aware of these policies.
- Consequently, persons with disabilities are frequently left out of planning, implementation and management of different public services.

Chapter 3

Identification of the Impact of Disability and Differentiated Services

3.1. The Impact of Disability and Vulnerability on Daily Life

- ❖ People respond to disabilities in different ways. Some react negatively.
- ❖ Thus, in this situation the quality of life of PWDs will be negatively affected.
- ❖ Others prefer to focus on their abilities as opposed to their disabilities and continue to live a productive life.
- ❖ There are several factors that affect and impact of the life an individual with disability.
- ❖ The following are considered as the most known factors in determining the impact of disability on an individual.

❖3.1.1.The Nature of impairment

- ❖ Impairment can be acquired as a result of an accident, or disease that may be congenital or acquired (pre-natal, or post-natal).
- ❖ If the impairment is acquired, it is more likely to cause a negative reaction than a congenital impairment.
- ❖ The acquired impairment requires more rehabilitation service than the congenital ones.

3.1.2. The Individual's Personality

- ❖ The individual personality can be typically positive or negative, dependent or independent, goal-oriented or laissez-faire.
- ❖ Someone with a positive outlook is more likely to embrace impairment than someone with a negative outlook.
- ❖ Someone who is independent will continue to be independent and someone who is goal-oriented will continue to set and pursue goals.

3.1.3. The Meaning of the impairment to the Individual

- Does the individual define himself/herself by his/her looks or physical characteristics?
- If so, he/she is more likely to feel defined by his/her impairment and thus it will have a negative impact.

❖3.1.4. The Individual's Current Life Circumstances

- ❖The influence of this situation manifests through the following factors:
 - ❖The condition that the individual is independent or dependent on others (parents) in his/her living;
 - ❖The economic and academic status of the individual with disability or his/her caregivers;
 - ❖If the individuals with impairments are happy with their current life circumstance, they are more likely to embrace their impairment, whereas, if they are not happy with their circumstances, they often blame their impairment.

3.1.5. The Individual's Support System

- ❖ The individual's support from family, a significant other, friends, or social groups contribute to minimize the impact of impairment on their overall personality
- ❖ Common effects of impairment/disability may include:
 - ❖ Limited to health conditions of the person;
 - ❖ Mental health issues including anxiety and depression;
 - ❖ Loss of freedom and independence;

- ❖ Frustration and anger at having to rely on other people;
- ❖ practical problems including transport;
- ❖ Choice of activities;
- ❖ Accessing buildings;
- ❖ Unemployment;
- ❖ Problems with learning and academic study;
- ❖ Loss of self-esteem and confidence especially in social situations.

- ❖ But most of these negative effects do exist due to restricted environments, not as a result of direct impact of the impairment.
- ❖ Persons with disabilities are diverse and heterogeneous, while stereotypical views of disability emphasize wheelchair users and a few other “classic” groups such as blind people and deaf people.
- ❖ Disability encompasses the child born with a congenital condition such as cerebral palsy or the young soldier who loses his leg to a land-mine, or the middle-aged woman with severe arthritis, or the older person with dementia, among many others.

- ❖ Health conditions can be visible or invisible; temporary or long term; static, episodic, or degenerating; painful or inconsequential.
- ❖ Note that many people with disabilities do not consider themselves to be unhealthy.
- ❖ Persons with disabilities have diverse personal factors with differences in gender, age, language, socioeconomic status, sexuality, ethnicity, or cultural heritage.

- ❖ Women with disabilities experience the combined disadvantages associated with gender as well as disability, and may be less likely to marry than non-disabled women.
- ❖ People who experience mental health conditions or intellectual impairments and severe/multiple impairment appear to be more disadvantaged in many settings than those who experience physical or sensory impairments.

3.1.6. Economic Factors and Disability

- ❖ There is clear evidence that people living with poverty are exposed to health problems that may cause impairment and disabling environment.
- ❖ This is true even in advanced economies.
- ❖ The impact of absolute or relative economic deprivation on the onset of pathology crosscuts conditions with radically different etiologies, encompassing infectious diseases and most common chronic conditions.
- ❖ The lack of resources can adversely affect the ability of an individual to function with a disabling condition.

- ❖ For example, someone with an amputated leg who has little money or poor health insurance may not be able to obtain a proper prosthesis, in which case the absence of the limb may then force the individual to withdraw from jobs that require these capacities.
- ❖ Similarly, economic resources can limit the options and abilities of someone who requires personal assistance services or certain physical accommodations.

- ❖ The individual also may not be able to access the appropriate rehabilitation services to reduce the degree of potential disability either because they cannot afford the services themselves or cannot afford the cost of specialized transportation services.
- ❖ The advanced economy of the communities and the country at large significantly make available enabling environment in infrastructure, public services and job opportunities for the participation of PWDs.

❖ In the countries having advanced economy, governments may apply disability compensation policy.

3.1.7. Political Factors and Disability

❖ The political system, through its role in designing public policy, can and does have a profound impact on the extent to which impairments and other potentially disabling conditions will result in disability.

- ❖ If the political system is well enforced it will profoundly improve the prospects of people with disabling conditions for achieving a much fuller participation in society, in effect reducing the font of disability in work and every other domain of human activity.
- ❖ Thus, the political good will of the government that manifests at policy and implementation level creates enabling environment for full and effective participation of PWDs in all aspects of life of the society by reducing the impact of the impairment and forms of impediments.

3.1.8. Psychological Factors of Disability

- ❖ There are five constructs that may result in psychological influence on the psychological makeup of PWDs in reference to disabling conditions.

I. Social Cognitive Processes

- ❖ Cognition consists of thoughts, feelings, beliefs, and ways of viewing the world, others, and ourselves.
- ❖ Three interrelated cognitive processes have been selected to illustrate the direct and interactive effects of cognition on disability.
- ❖ These are self-efficacy beliefs, psychological control, and coping patterns which all these are socially constructed.

II. Self-Efficacy Beliefs

- ❖ Self-efficacy beliefs are concerned with whether or not a person believes that he or she can accomplish a desired outcome (Bandura, 1977, 1986).

III. Psychological Control

- ❖ Psychological control, or control beliefs, is akin to self-efficacy beliefs in that they beliefs regarding one's ability to exert control or change a situation.

IV. Coping Patterns

- ❖ Coping patterns refer to behavioral and cognitive efforts to manage specific internal or external demands that tax or exceed a person's resources to adjust.

V. Personality Disposition

- ❖ Optimism in contrast to pessimism is the general tendency to view the world, others, and oneself favorably.
- ❖ People with an optimistic orientation rather than a pessimistic orientation are far better across several dimensions.
- ❖ Optimists tend to have better self-esteem and less hostility towards others and tend to use more adaptive coping strategies than pessimists.

3.1.9. The Family and Disability

- The family can be either an enabling or a disabling factor for a person with a disabling condition.
- Although most people have a wide network of friends, the networks of people with disabilities are more likely to be dominated by family members.
- Even among people with disabilities who maintain a large network of friends, family relationships often are most central and families often provide the main sources of support.
- This support may be informational (providing advice or referrals), or emotional (giving love and support).

- ❖ Families can also fulfill their responsibilities in meeting the special needs of their children with disabilities by making available specialized services and assistive devices and technologies
- ❖ It is important to note, however, that families may also be disabling.
- ❖ Some families promote dependency.
- ❖ Others fatalistically accept functional limitations and conditions that are amenable to change with a supportive environment.

- In both of these situations, the person with the potentially disabling condition is not allowed to develop to his or her fullest potential.
- Families may also not provide needed environmental services and resources.
- For example, families of deaf children frequently do not learn to sign, in the process impeding their children's ability to communicate as effectively as possible.

3.2. Special Needs of Persons with Disabilities and other Vulnerable Groups

- The special needs of PWDs are emanated from different factors.
- These are:
 - Personal experience of individuals with impairments;
 - Type of the impairment;
 - Severity /degree of the impairment; and
 - Onset of the impairment.
- Hence, professionals as per their discipline should give response differently to the needs of PWDs considering these realities.

- ❖ Analyzing the human beings, Maslow has identified five categories of needs, with different priority levels, in the following order:
 - ❖ Survival (physiological);
 - ❖ Safety;
 - ❖ Social needs;
 - ❖ Esteem; and
 - ❖ Self-actualization (fulfillment).
- ❖ Maslow's model is also valid for persons with disabilities and other vulnerable groups, whose needs are regular and or similar to those of ordinary persons.
- ❖ It is obvious that survival is a priority need for PWDs due to the existing disabling condition such as lack of opportunity for personal hygiene, feeding and Adaptive Daily Living skills (ADL).

Abraham's Maslow Hierarchy

- ❖ Persons with disabilities and other vulnerable groups have socio-emotional, psychological, physical and social environmental and economic needs in general.
- ❖ However, the following are the basic and special needs of PWDs and other vulnerable groups needed to be available to ensure their equal participation in all activities of the society:
 - ❖ Full access to the environment (towns, countryside & buildings);
 - ❖ Accessible transport system;
 - ❖ Technical aids and equipment;

- ❖ Accessible/adapted housing;
- ❖ Personal assistance and support;
- ❖ Inclusive education and training;
- ❖ Adequate income;
- ❖ Equal opportunity for employment;
- ❖ Appropriate and accessible information;
- ❖ Advocacy (towards their human right);
- ❖ Counseling;
- ❖ Appropriate and accessible health care;
- ❖ Assistive appliances.

3.2.1. Belongingness and disability

- ❖ Family relationships as a means of connecting to community and being known by others, and knowing others outside the family are important.
- ❖ Different kinds of relationship contributed to this sense of belonging, ranging from the more superficial nodding acquaintances to specific informal support from known others, to the intimacy of close friends and kin.

- ❖ Historically for people with disabilities, rurality was once the site of exclusion, rather than belonging, where identity and gender were disregarded in favor of ensuring protection of people with disabilities and of the society in which they lived.
- ❖ People with disabilities and marginalized groups feel isolated.
- ❖ Some persons with disabilities have actively sought to migrate to urban environments, to escape from the confines and constraints of small rural environments and to build broader social networks away from the farm.

3.3. Disability Inclusive Intervention and Rehabilitation Services

- ❖ A '*One-size-fits-all*' approach to provide services for persons with disabilities and vulnerable groups is no longer enough.
- ❖ Including people with disabilities in everyday activities and encouraging them to have roles similar to peoples who do not have a disability is *disability inclusion*.
- ❖ This involves more than simply encouraging people; it requires making sure that adequate policies and practices are in effect in a community or organization.

- ❖ Inclusion should lead to increased participation of PWDs in socially expected life roles and activities such as: being a student, worker, friend, community member, patient, spouse, partner, or parent.
- ❖ Disability inclusion means provision of differentiated services for persons with disabilities and other vulnerable groups.
- ❖ Differentiated service means a multiple service delivery model that can satisfy the most needs of persons with disabilities and other vulnerable groups.

- ❖ This includes the availability of accommodative public services in infrastructure, health care, education, social protection etc.
- ❖ Persons with disabilities and other vulnerable groups are often excluded (either directly or indirectly) from development processes and humanitarian action because of physical, attitudinal and institutional barriers.
- ❖ The effects of this exclusion are increased inequality, discrimination and marginalization.

❖3.3.1. Definition and components of Rehabilitation Intervention

- ❖Rehabilitation is a process designed to optimize function and improve the quality of life of those with disabilities.
- ❖There are general underlying concepts and theories of rehabilitation interventions.
- ❖Examples of these theories and concepts include movement and motor control, human occupation models, education and learning, health promotion and prevention of additional and secondary health conditions, neural control and central nervous system plasticity, pain modulation, development and maturation, coping and adjustment, biomechanics, linguistics and pragmatics, resiliency and self-reliance, auditory processing, and behavior modification.

- ❖ The conduct of rehabilitation intervention is not a simple process. It involves multiple participants, and it can take on many forms.
- ❖ The following is a description of the individual components that, when combined, comprise the process and activity of rehabilitation:
 - ❖ Multiple Disciplines;
 - ❖ Physicians;
 - ❖ Occupational Therapists;
 - ❖ Physical Therapists;
 - ❖ Speech and Language Therapist;
 - ❖ Audiologists;
 - ❖ Rehabilitation Nurses;

- ❖ Social Workers;
- ❖ Case Managers;
- ❖ Rehabilitation Psychologists;
- ❖ Neuropsychologists;
- ❖ Therapeutic Recreation Specialists;
- ❖ Rehabilitation Counselors;
- ❖ Orthotists and Prosthetists;
- ❖ Additional Rehabilitation Professionals;
- ❖ Persons with the Disability and His or Her Family;
- ❖ Community Based Rehabilitation Workers.

3.3.2. Strategies to Disability Inclusive Intervention and Rehabilitation

A)Prevention

- This includes primary Prevention (Action intended to avoid the causes of impairment), Secondary prevention (Early Intervention) and tertiary prevention (Rehabilitation).

B) Implementing the Twin-track Approach

- One of the strategies relevant for the implementation of inclusion in terms of disability is Twin-track approach.
- The twin-track approach involves:
 - (1) Ensuring all mainstream programs and services are inclusive and accessible to persons with disabilities and other vulnerable groups time; and
 - (2) Providing targeted disability-specific support to persons with disabilities.

C) Implement Disability Inclusive Project/ Program

- ❖ As public service provider all sectorial strategies, program, projects and services must be disability-inclusive.
- ❖ The sectors operations should be largely framed within broad programs, making it very important to ensure that disability inclusion is reflected in program strategies and design documents.
- ❖ This in turn ensures the mainstreaming and implementation of disability issues at program level.
- ❖ However, persons with disabilities are often not considered in crucial stages of most sectorial and developmental program and projects because of lack of awareness about the special needs of people with disabilities, and other vulnerable groups.

❖ The following tips will help to overcome the challenges as key considerations for including persons with disabilities in all program and project cycle management stages of Assessment, Planning, Implementation and Monitoring, and Reporting/Evaluation:

- ❖ Education and vocational training;
- ❖ Health;
- ❖ Relief and social services;
- ❖ Infrastructure and camp improvement, shelter, water and sanitation and environmental health;
- ❖ Livelihoods, employment and microfinance;
- ❖ Protection;
- ❖ Humanitarian and emergency response.

D)Community Based Rehabilitation (CBR)

- ❖Community Based Rehabilitation (CBR) is a strategy crafted for developing countries with an intention to bringing children with disabilities who are kept at home to public services such as: education, self-employment, health care etc. through providing them multi-dimensional home-based rehabilitation services.
- ❖For this purpose, there is a need to recruit and deploy CBR workers from and within the local communities respectively.

E) Inclusiveness and Assistive Technology

- ❖ There are various organizational definitions for assistive technology:
 - ❑ The international standard ISO 9999 defines AT (referring to AT as “technical aid”) as “any product, instrument, equipment or technical system used by a disabled person, especially produced or generally available, preventing, compensating, monitoring, relieving or neutralizing the impairment, disability or handicap”.

❖ For persons with disabilities and other vulnerable groups, technological developments such as the proliferation of the internet and the provision of services for accessing digital television such as audio description (video description), closed signing, and the availability of subtitles (captions) in live broadcasts enabled by speech-to text technologies can make an important contribution to facilitating independent living.

❖ Technologies promote independence for people with disabilities and other vulnerable groups.

- ❖ The use of devices, computers, robots, and other established assistive technology (AT) can potentially increase the autonomy of people with disabilities and other vulnerable groups, by compensating for physical limitations and circumventing difficulties with normal activities of daily living (ADL).
- ❖ In modern societies, persons with disabilities, and other marginalized and other vulnerable groups can attain some components of wellbeing such as access to services using assistive technology (AT).
- ❖ Other components, such as freedom of navigation and travel, are much more difficult because of environmental obstacles encountered by the disabled.

- ❖ Surgery, generic therapy, rehabilitation, human assistance, and the use of assistive technology (AT) help disabled people cope with their disabilities.
- ❖ Unfortunately, such assistance is not always available and not necessarily cost-effective.
- ❖ AT can increase the autonomy, independence, and quality of life for Persons with disabilities and other vulnerable groups and can also enable the integration of social, professional, and environmental aspects of life for Persons with disabilities and other vulnerable groups.

- ❖ Assistive technology affords Persons with disabilities and other vulnerable groups' greater equality of opportunity, by enhancing and expanding their communication, learning, participation, and achievement with higher levels of independence, wellbeing, and quality of life.
- ❖ Assistive Technology varies from low-tech devices such as a cane or adapted loop, to high-tech systems such as assistive robotics or smart spaces.
- ❖ Assistive technology encompasses all systems that are designed for Persons with disabilities and other vulnerable groups, and that attempt to compensate the handicapped.

3.4. Implement Inclusive Job Opportunities and Employment

- ❖ The right to work is fundamental to being a full and equal member of society, and it applies to all persons, regardless of whether or not they have a disability.
- ❖ A decent job in the open labor market is a key bulwark against poverty.
- ❖ It also enables people to build self-esteem, form social relationships, and to gain skills and knowledge.
- ❖ Despite the fact that the majority of jobs can be performed by individuals with disabilities, the pathways to their employment are often strewn with barriers.

- ❖ Studies indicated that there is high rate of unemployment within working age PWDs compared with non-disabled productive forces even in industrialized countries.
- ❖ Most of PWDs and other vulnerable groups are forced to work in informal works without legal contract and job security.
- ❖ Even when persons with disabilities are formally employed, they are more likely to be in low-paid, low-level positions with poor prospects for career development.
- ❖ The recently adopted 2030 Agenda for Sustainable Development calls on governments around the world to promote full employment and decent work for all, including persons with disabilities and other vulnerable groups.

- ❖ Persons with disabilities may be prevented from working due to the following barriers:
 - ❖ Inaccessible transportation services;
 - ❖ Lack of accessible information and communications services;
 - ❖ Preference of employers for candidates without disabilities;
 - ❖ Legal stipulations that prevent individuals with particular impairments from working in certain fields;
 - ❖ Discouragement of family and community members;
 - ❖ Lack of opportunity to education and vocational training to meet the requirements of labor market;
 - ❖ Benefit trap.

❖ The following are key strategies needed for the promotion of job opportunity for PWDs and other vulnerable groups.

- ❖ Anti-Discrimination Legislation;
- ❖ Vocational Education and Training;
- ❖ Wage Subsidies;
- ❖ Workplace Accommodation Schemes;
- ❖ Workers' Compensation;
- ❖ Quota Systems;
- ❖ Sheltered Workshops;
- ❖ Private Sector Initiatives;
- ❖ Employer Networks;

- ❖ Support Disability-Inclusive Business;
 - ❖ Support Persons with Disabilities in the Workplace;
 - ❖ Building a More Inclusive Society;
 - ❖ Improve Data Collection on Disability and Employment.
- ❖ Regardless of those challenges that may affect the stamina and motivation of PWDs, studies confirmed that PWDs seriously want to work to:
- ❖ Livelihood;
 - ❖ Ensure their social contacts; and
 - ❖ Develop their self-esteem.

Chapter 4

Promoting Inclusive Culture

4.1. Definition of Inclusive Culture

- ❖ As stated in chapter 2, inclusion promotes the creation of accommodative community that ensures the belongingness and social networking among members of the community.
- ❖ Culture is “the ideas, customs, and social behavior of a particular people or society.”
- ❖ Culture plays a huge role in accommodating the diverse needs of individuals and groups.
- ❖ An inclusive culture involves the full and successful integration of diverse people in different forms of areas where people will work and live together such as work place, schools, villages etc.

❖ Inclusive culture encompasses both formal and informal policies and practices, and involves several core values such as:

❖ **Representation:** (The presence of people with disabilities across a range of membership and leadership within the community and given institution);

❖ **Receptivity:** (Respect for differences);

❖ **Fairness:** (Equitable access to all resources, opportunities, networks and decision-making processes).

4.2. Dimensions of inclusive culture

- There are three dimensions/elements of an inclusive culture:
 1. Universal design refers to the construction of structures, spaces, services, communications and resources that are organically accessible to a range of people with and without disabilities, without further need for modification or accommodation.
 2. Recruitment (Training and Advancement Opportunities)
 - This dimension of inclusive culture refers to the promotion of recruitment and training of PWDs for a certain position and advance their professional knowledge and competence.

Cont'd....

3. Workplace Accommodations and Accessibility (Policy & Practice) plays a critical role in generating meaningful inclusion of people with disabilities.

- In addition to recruitment, training and advancement, workplace policies need to be carefully planned for the provision of reasonable accommodations

4.3. Building inclusive community

❖ An inclusive community:

- ❖ Establishes foundation that respects all citizens, gives them full access to resources, and promotes equal treatment and opportunity;
- ❖ Works to eliminate all forms of discrimination;
- ❖ Engages all its citizens in decision-making processes that affect their lives;
- ❖ Values diversity; and
- ❖ Responds quickly to racist and other discriminating incidents.

- ❖ An inclusive society aims at empowering and promoting social, economic, and political inclusion of all, irrespective of age, sex, disability, race, ethnicity, origin, religion, economic, or other status.
- ❖ It is a society that leaves no one behind.
- ❖ We work to ensure that societies are open and inclusive to all.

❖ The following factors justify why building an inclusive community is important:

- ❖ Acts of exclusion and injustice based on group identity and other factors should not be allowed to occur and/or continue;
- ❖ All people have the right to be part of decisions that affect their lives and the groups they belong to; and
- ❖ Diversity enriches our lives, so it is worthwhile to value our community's diversity.

❖ An inclusive community is characterized by the following features:

❖ Integrative and cooperative;

❖ Interactive;

❖ Invested;

❖ Diverse;

❖ Equitable;

❖ Accessible and Sensitive;

❖ Participatory;

❖ Safe.

❖ In an inclusive society or institution having inclusive culture, there is a need of leaders having inclusive behavior such as:

❖ Empowerment;

❖ Accountability;

❖ Courage;

❖ Humility.

4.5. Inclusive values in terms of cultural norms

- ❖ Inclusion is most importantly seen as putting inclusive values into action.
- ❖ The seven pillars of inclusion are:
 - ❖ Access;
 - ❖ Attitude;
 - ❖ Choice;
 - ❖ Partnership;
 - ❖ Communication;
 - ❖ Policy; and
 - ❖ Opportunity.

❖ Alongside these pillars of inclusion, the following are the frameworks of inclusive values:

❖ Equality;

❖ Rights;

❖ Participation;

❖ Community;

❖ Respect for Diversity;

❖ Sustainability;

❖ Non-violence;

- ❖ Trust;
- ❖ Compassion;
- ❖ Honesty;
- ❖ Courage;
- ❖ Joy;
- ❖ Love;
- ❖ Hope/Optimism; and
- ❖ Beauty.

A framework of
inclusive values

4.6. Indigenous Inclusive Values and Practices

- ❖ Indigenous values are customs and norms of a society developed in the course of the past cultural practices and enriched and transferred from generation to generation.
- ❖ Incorporating Indigenous ways of learning into educational practices has potential to benefit both Indigenous and non-Indigenous learners.

- In modern curriculum the following skills are needed to be included:
 - Collaboration;
 - Creativity;
 - Innovation;
 - Problem-solving;
 - Inquiry;
 - Multicultural literacy, etc.
- Indigenous knowledge and practice should be carefully treated avoiding harmful cultural beliefs.

Activities

1. What are the manifestations of inclusive culture?
2. What are the key values of inclusive culture?
3. What are the benefits of inclusive culture to PWDs?

Chapter 5

Inclusion for Peace, Democracy and Development

5.1. Definition of peace, democracy and development from the perspective of Inclusiveness

- ❖ Peace can be defined in several ways.
- ❖ However, for the purpose of the study this course peace is defined as creating mutual understanding, positive relationship between individuals and groups.
- ❖ These groups may include culturally, linguistically, economically and biologically heterogeneous clusters.

- ❖ These groups are living side by side in a harmony with reciprocated respect or create societal friendship with all the diversities without conflict.
- ❖ This means developed interpersonal peace through deep respect for other persons, justice, tolerance and cooperation.
- ❖ Human being is interconnected and should be free from negative force, fear, hatred, anger, tension, violence, stress, anxiety and any kind of destructions.

- Peace makes the mind quiet and calm prevents anxieties, worries, stress and fears, and awakens inner strength and confidence, develop freedom, happiness, love, joy, justice and gratitude.
- Peace can be achieved through formal and informal inclusive education.
- Inclusive education is a foundation for inclusiveness in all aspects of life.
- It is important to realize the role of inclusive education in creating a society which is peaceful, democratic and prosperous

- ❖ Hence inclusive education is crucial for:
 - ❖ Fostering education that promotes the values, attitudes and behavior inherent in a culture of peace, including conflict prevention and resolution, dialogue, consensus-building and active non-violence;
 - ❖ Promoting sustainable economic and social development by targeting the eradication of poverty and social inequalities;
 - ❖ Promoting respect for the Universal Declaration of Human Rights at all levels;
 - ❖ Promoting gender equality in economic, social and political decision-making;

- ❖ Fostering democratic participation and citizenship and supporting processes that promote and sustain democracy;
- ❖ Advancing understanding, and respect for cultural diversity, and human solidarity by promoting a dialogue among societies;
- ❖ Supporting participatory communication and the free flow and sharing of information and knowledge in the promotion of a culture of peace;
- ❖ Promoting international peace and security through action such as the promotion of general and complete disarmament.

❖ Contrary to the importance of inclusive education, exclusion in education creates undesirable result for a nation against those positive advantages of inclusive education by affecting social justice and equality.

5.2. Sources of Conflict

- ❖ There are a number of sources of conflict attributed to economic, social and political reasons.
- ❖ However, it is believed that conflict begins within the Individual.

❖ As a result, the following characteristics, behaviors and attitude of individuals may cause conflict at all levels of social strata in the absence of inclusiveness:

- ❖ Selfishness (living only for oneself);
- ❖ Lust;
- ❖ Envy;
- ❖ Exploitation (taking advantage over others);
- ❖ Prejudice (partiality);
- ❖ Self-indulgence;
- ❖ Vengeance (retaliation);
- ❖ Arrogance (self-importance).

- ❖ It is obvious that these mal practices/behaviors are the main causes of exclusionary practices in communities that affect the right of others.
- ❖ The exclusionary practices may be manifested through discrimination, marginalization and social stigma.
- ❖ There is no doubt that peace is the remedy for social injustices and other mal practices that result in conflict between individuals or groups.
- ❖ Hence, sustainable peace is vitally important to establish prosperous and stable society.

❖ The mechanism for the foundation of sustainable peace is attributed to the expansion of formal and informal inclusive education with the aim of creating inclusive society with the following competencies in young and adult populations:

- ❖ Skills of sifting the truth from propaganda or bias that surrounds them in every culture;
- ❖ Respect for the wise use of resources and appreciation for more than just the materialistic aspects of quality of life;
- ❖ Respect for different points of view and the ability to see the world through the eyes of others;
- ❖ Skills to resolve conflict in non-violent ways;
- ❖ The desire and ability to participate in shaping society, in their own community, their nation and the world.

- ❖ Building of peace requires the following prerequisites and considerations:
 - ❖ Fostering inclusion, ensuring access to justice, strengthening the social fabric and delivering good governance;
 - ❖ Reaffirm a commitment to human rights, the foundation for human dignity and just societies;
 - ❖ Foster social resilience by strengthening inclusion and addressing inequality;
 - ❖ Think locally and act globally;
 - ❖ Protect and support civil society in fostering sustainable peace.

- ❖ The following mechanisms use to resolve conflicts
 - ❖ Agree on a mutually acceptable time and place to discuss the conflict;
 - ❖ State the problem as you see it and list your concerns
 - ❖ Let the other person have his/her say;
 - ❖ Listen and ask questions;
 - ❖ Stick to one conflict at a time (to the issue at hand);
 - ❖ Seek common ground;
 - ❖ Seek for win-win approaches.

5.3. The Democratic Principles for inclusive practices

- ❖ Democracy is the philosophy that promotes inclusion and good governance to the best interest of people.
- ❖ It means the rule of the people, by the people, for the people; and where “people” is to mean all human being, regardless of the diversities.
- ❖ It brings democratic values to education and can include self-determination within a community of equals, as well as such values as justice, respect and trust of diversities
- ❖ Schools are the ideal place to promote democracy.
- ❖ One of the most important tasks of schools should be helping students to realize the values of democracy.

❖ The democratic values promote:

❖ Enhance protected rights;

❖ Independent quality life for all;

❖ Freedom;

❖ Pursuit of happiness;

❖ Justice;

❖ Truthfulness,

❖ Respect;

❖ Tolerance for diversity and partisanship.

- ❖ The most important function of democratic education is to make the democracy natural attitude and way of thinking of man by developing the thought of democracy in human mind.
- ❖ Inclusive education instills the values of cooperation, fairness and justice into the hearts of our students.

- ❖ Inclusive education when practiced well is very important because:
 - ❖ All children are able to be part of their community and develop a sense of belonging and become better prepared for life in the community today as children and tomorrow as adults;
 - ❖ It provides better opportunities for learning. In the absence of democracy, exclusion is prone to be exercised, today in the school and tomorrow in the society;
 - ❖ Democracy is one of the principles of inclusiveness in the process of building inclusive society that begun in schools.

❖5.4. Respecting diverse needs, culture, values, demands

❖Inclusive education is practiced based on the following principles of democracy:

- ❖Diversity enriches and strengthens all communities;
- ❖All persons with disabilities different in their needs, potentials, learning and working styles;
- ❖Their achievements according to their potentials are equally valued, respected and celebrated by society;
- ❖All learners are capable to fulfill their potential by taking into account individual requirements and needs.

❖ Likewise, inclusive development is necessary for sustainable economic, social and political progress of a country.

❖ Development should be all inclusive and participatory that promotes equal benefit for all citizens from the heritage of prosperity earned by the society.

❖ These diversities include:

❖ Race;

❖ Ethnicity;

❖ Age;

❖ Ability;

❖ Language;

❖ Nationality;

❖ Socioeconomic status;

❖ Gender;

❖ Culture;

- Religion;

- Disability;

- Political thought; and

- Sexual orientation.

- All these diversities in all areas of life including work place and education should be respected and accepted by all members of the society with an intention to sustaining peace, development and democracy.
- Valuing diversities recognizes differences between people and acknowledges that these differences are a valued asset.
- Multicultural education is an important component of valuing diversity.
- It respects diversity while teaching all children and youth to become effective and participating members of a democratic society.

- ❖ It is important to value diversity because; people build a stronger sense of identity and wellbeing, and have better education and career outcomes when their diverse strengths, abilities, interests and perspectives are understood and supported.
- ❖ It helps dispel negative stereotypes and personal biases about different groups.
- ❖ Culture is our way of living, it refers to the shared language, beliefs, values, norms, behaviors, and material objects that are passed down from one generation to the next.
- ❖ Cultural diversity in the world is diverse and a blessing gift for development; but become sources of conflict.

❖ In order to achieve unity in diversity in diverse culture valuing the following issues is highly important:

- ❖ **Recognition** of the abundant diversity of cultures;
- ❖ **Respect** for the differences;
- ❖ **Acknowledging** the validity of different cultural expressions and contributions;
- ❖ **Accepting** what other cultures offer;
- ❖ **Encouraging** the contribution of diverse groups;
- ❖ **Empowering** people to strengthen themselves and others to achieve their maximum potential by being critical of their own biases; and
- ❖ **Celebrating** rather than just tolerating the differences in order to bring about unity through diversity.

- ❖ Among several elements of diversities, race and ethnicity are the most known ones by influencing the attitude and human relationship.
- ❖ Race (black and white) refers to biological features, whereas ethnicity (Germans and Spaniards) is social construct.
- ❖ Ethiopia is consisting of people of different ethnic origin.
- ❖ Despite the popular belief that Ethiopia is just one big country of a single ethnic group, there are over 83 different ethnic groups speaking more than 83 different languages and 200 dialects.

Chapter 6

Relevant Policy and Legal Frameworks

6.1. Components of Policy and legal frameworks

- ❖ Discrimination against persons with disabilities has a long history and persons with disabilities are regularly excluded from participation in society and denied their human rights.
- ❖ Discrimination against the disabled can take many forms, ranging from limited educational opportunities to more subtle forms, such as segregation and isolation due to attitudinal, environmental and institutional barriers.

- ❖ The effects of discrimination are most clearly appeared in the sphere of economic, social and cultural rights which is manifested in the areas of housing, employment, transport, cultural life and access to public services.
- ❖ According to the Universal Declaration of Human Rights, of 1948 Article (1), “All human beings are born free and equal in dignity and rights.”

- ❖ However, this is far from being a reality for persons with disability throughout the world that resulted in disability movement and struggle by DPOs for the promotion of the human rights of their members with disabilities.
- ❖ The disability movement undertaken as of the second half of 20 century forced member countries of the UN to enact disability-mainstreamed policy and legal frameworks at the international and domestic levels.
- ❖ These policy and legal instruments recognized the economic, social, political and human rights of PWDs in terms of their specific/special needs.

- ❖ The formulation of legal frameworks regarding persons with disabilities suggests some measures that governments should take in order to ensure that persons with disabilities become equal citizens.
- ❖ The rules also act as an international instrument and as a mechanism of control to guarantee the effective application of the stated rights.
- ❖ However, strong commitment and proactive action is required from the governments for the effective implementation and practicality of those disability mainstreamed and disability specific policy and legal frameworks enshrined at the international and domestic levels.

6.2. International legal frameworks in relation to inclusiveness

- In addition to the general policy and legal frameworks developed at international and domestic levels for the promotion of basic rights of citizens, the following international instruments included provisions regarding PWDs.
 - The Convention on the Rights of the Child of 1989;
 - 1990 The World Declaration on Education for All, Jomtien;
 - The UN Sustainable Development Goal of 2016.

❖ Alongside with these general legal frameworks, the following policy and programmatic documents are also disability-specific instruments developed by the UN giving recognition for the rights and special needs of PWDs:

- ❖ Standard Rules on the Equalization of Opportunities for Persons with Disability of 1993;
- ❖ UNESCO Salamanca Statement and Framework for Action of 1994;
- ❖ The UN Convention on the Right of Persons with Disabilities of 2006.

6.3. Domestic policy and legal frameworks in relation to inclusiveness

- ❖ If we talk about Ethiopia's legal and policy documents, we find no disability related instrument until 1971 of the imperial order to provide for the establishment of the rehabilitation agency.
- ❖ Hence, it is possible to speak confidently that 'disability was not a matter of law and policy before 1991.
- ❖ Ethiopia has signed most of the international conventions and declarations to protect and respect the rights of persons with disabilities.

❖ Ethiopia developed disability specific and disability-mainstreamed policy and legal frameworks based on those international instruments stated above.

❖ These are:

- ❖ The 1994 Education and Training Policy;

- ❖ Constitution of the Federal Democratic Republic of Ethiopia-1995;

- ❖ Education Sector Development Program (ESDP) II, III, IV and V;

- ❖ The 2008 National TVET Policy;

- ❖ A proclamation No 568/2008 to provide for the right to employment of persons with Disabilities;

- ❖- The Ethiopian Building Proclamation No. 624/2009;
- ❖The Revised Special Needs/Inclusive Education Program Strategy of 2012;
- ❖National Plan of Action of Persons with Disabilities (2012-2021);
- ❖The Construction Policy of 2014;
- ❖The Social Protection Policy of 2014;
- ❖The Civil Servant Proclamation No.1064/2017;
- ❖The Revised Higher Institutions Proclamation No. 1152/2019;
- ❖Labor Proclamation- No. 1156/2019.

Activities

1. Which international human right instrument brought a turning point in the history of disability movement? Why?
2. Do you believe that the FRDE Constitution of 1995 promotes the issue of disability from human right perspective? Why? (Please refer Article 41 (5) of the Constitution).
3. What are the major shortcomings of the government in treating the issue of disability at policy and implementation levels?

Addis Ababa University

Chapter 7

Resources Management for Inclusion

7.1. Resources for inclusion

- ❖ The resource should be considered for people with disabilities in workplaces, social gatherings, recreational and in schools that help them to feel comfortable, secure and work at their independent and team activities.
- ❖ This is needed due to the reason that the occurrence of impairment requires opportunistic cost in order to enable PWDs use their potential and capacity by mitigating the impact of activity limitation they may face caused by their impairment.

- ❖ All concerned bodies should be inclusive in their planning, budgeting and taking action for the education and other services needed for persons with disabilities.
- ❖ For instance, in the school settings resource rooms are very important.
- ❖ The resource room is a classroom where a special education program can be delivered to a student with a disability and learning difficulty.

- ❖ It is for those students who belong to a regular class but need some special instructions in an individualized or small group setting for a portion of the day.
- ❖ This program includes remedial, compensatory and developmental instruction, which is provided in small groups for usually for certain hours per week.

❖ When additional support is appropriate to meet the student's needs, the student can receive the pull-out program.

❖ Methods and materials are adapted to students' learning styles and characteristics using multisensory and other specialized approaches.

- ❖ The specialized series needed for students with disabilities in the school requires both material and human resources.
- ❖ Human resource includes:
 - ❖ Sign language interpreter;
 - ❖ Braille specialist;
 - ❖ Mobility and orientation expert;
 - ❖ Special needs educators;
 - ❖ Speech and language therapist;
 - ❖ Physiotherapist;
 - ❖ Behavioral therapist etc.

❖ Likewise, the availability of the following material resources is highly important for school-based services.

1. Adaptive educational materials and devices such as slate and stylus, brail paper, type writer, screen reader software, and adaptive accessories of computers, large print materials, embossers, hard copy readers, digital recorders, Talking Books, materials prepared in visual and tactile formats including braille text books and learning aids prepared in tactile format etc.

2. Assistive appliances such as wheelchair, crutch and other prosthetic and orthopedic devices, hearing aid, white cane, magnifiers including CCTV etc.

7.2. Planning for inclusive services

- ❖ All stakeholders are required to mainstream the issue of disability in their service delivery.
- ❖ As a result, the issue of disability should be considered at planning, implementation and monitoring and evaluation steps of programs crafted by implementing institutions.

- ❖ Planning includes the allocation of earmarked budget, materials and skilled human power to facilitate the implementation of disability-mainstreamed programs and services.
- ❖ It is obvious, that assessment of the prevalence of PWDs and their special needs is the prerequisite for planning.
- ❖ For this purpose, all service providing institutions are required to assign professional coordinator.

- ❖ Planning in reference to disability needs two facets:
 - ❖ Mainstreaming the issue of disability in the general annual action plan of the institution; and
 - ❖ Developing disability-specific action plan to meet the special needs of the targeted persons with disabilities.

Activities

1. Why public service providing sectors are required to have ear-marked budget and or resource for the issues related to disability?
2. What kind of resource is needed for PWDs?
3. At what stage of project and program life span that the issue of disability should be taken into account?

Chapter 8

Collaborative Partnership among Stakeholders

8.1. Understanding the concepts of collaboration, partnership and stakeholder

- ❖ Collaboration is defined as “the act of working together to produce or create something according to the capacities and abilities of individuals.
- ❖ A person should not be discriminated due to mismatch with other people’s abilities; because he has his own quality in other perspectives.

- ❖ Collaboration provides every team member equal opportunity to participate and communicate their ideas.
- ❖ To sum up collaborative engagement accomplished by a sense of partnership of individuals or a certain team member leads to achieve common goals and outcomes that would benefit all participants.

8.2. Key elements of successful collaboration

- ❖ In collaborative engagement the relationship of actors includes a commitment to:
 - ❖ Mutual relationships and goals;
 - ❖ A jointly developed structure and shared responsibility;
 - ❖ Mutual authority and accountability for success;
 - ❖ Sharing of resources and rewards.

❖ For the success of team work and or collaborative engagement in work and other places, the following elements are needed:

❖ Respect;

❖ Communication;

❖ Delegation;

❖ Support.

❖ Here are a few qualities that a successful team possesses:

- 1.They communicate well with each other.
- 2.They focus on goals and results.
- 3.Everyone contributes their fair share.
- 4.They offer each other support.
- 5.Team members are diverse.
- 6.Good leadership.
- 7.They're organized.
- 8.They have fun.

❖ Collaboration or team work should be guided by the following general principle:

- ❖ Establish clear common goals for the collaboration;
- ❖ Define your respective roles and who is accountable for what, but accept joint responsibility for the decisions and their outcomes;
- ❖ Take a problem-solving approach – with a sense that all those in the collaborative arrangement share ownership of the problem and its solution;
- ❖ Establish an atmosphere of trust and mutual respect for each other's expertise;
- ❖ Aim for consensus decision-making;

- ❖ Ask for and give immediate and objective feedback to others in a nonthreatening and non-judgmental manner;
- ❖ Give credit to others for their ideas and accomplishments;
- ❖ Develop procedures for resolving conflicts and manage these processes skillfully;
- ❖ Better still, anticipate possible conflicts and take steps to avoid them as far as possible. This is not to say that disagreements can, or even should, be avoided;
- ❖ Arrange periodic meetings to review progress in the collaborative arrangements.

8.3. The benefits and challenges of collaboration

- ❖ Collective engagement or cooperation has the following benefits and advantages:
 - ❖ Higher employee productivity;
 - ❖ Greater efficiency and less duplicated effort;
 - ❖ Access to additional resources or lower costs through sharing resources such as office space, administration or other aspects of an organization's operation;
 - ❖ Improved service coordination across agencies, with better pathways or referral systems for service users;
 - ❖ Team work culture building.

❖ In contrary, the following are key challenges for collaboration and or team work:

- ❖ Indecisive decision-makers;
- ❖ "E-fail" This is a little term used for when email straight up fails;
- ❖ Miscommunication (When collaborating, there is always room for misinterpretation and miscommunication);
- ❖ Process sinking vs. process syncing.
- ❖ Too many cooks;
- ❖ Negativity.

8.4. Characteristics of Successful Stakeholder Partnerships

- ❖ A stakeholder is any person, organization, social group, or society at large that has a stake in the business.
- ❖ Thus, stakeholders can be internal or external to the business.
- ❖ A stake is a vital interest in the business or its activities.
- ❖ Some examples of key stakeholders are creditors, directors, employees, government (and its agencies), owners (shareholders), suppliers, unions, and the community from which the business draws its resources.

- ❖ Stakeholders are usually parties who have a stake in a project and have a great influence on its success or failure.
- ❖ The benefit of stakeholders' participation in a given and project or program can be measured by the following points
- ❖ Provide all stakeholders with full opportunities to share their views, needs and knowledge.
- ❖ Build consensus through bringing together a diverse range of stakeholders to share needs, information, ideas and knowledge and harmonize the objectives of individual groups to reach common societal goals.

❖ Successful stakeholder partnership is characterized by:

❖ Existence of an agreement;

❖ Sharing of profits or stratification for the services offered to the community;

❖ Establishing equal and equitable relationship;

❖ Membership without discrimination;

❖ Nature of liability;

- ❖ Fusion of ownership and control;
- ❖ Non-transferability of interest;
- ❖ Trust;
- ❖ Common values;
- ❖ Defined expectations;
- ❖ Mutual respect;
- ❖ Synergy;
- ❖ Great two-way communications.

❖ Good partners and allies as stakeholders on a certain project and program initiative:

❖ Have a similar audience;

❖ Are not your competitors;

❖ Can give you access to new customers and prospects;

❖ Want to work with you;

❖ Want something you can offer.

8.5. Strategies for community involvement in inclusive development

- ❖ Community development is about the inclusive involvement of all people, regardless of their diversities, enhancing equality, respecting their full right in terms of educational opportunities and employability.
- ❖ The creation of opportunities to enable all members of a community to actively contribute to and influence the development process and to share equitably in the fruits of any development endeavors.

- Participation has an intrinsic value for participants and a catalyst for further development.
- Due to the reason that it:
 - Encourages a sense of responsibility;
 - Guarantees that a felt need is involved;
 - Ensures things are done the right way; uses valuable indigenous knowledge;
 - Frees people from dependence on others' skills; and makes people more independent and productive.

- ❖ The following strategies are believed to be useful for inclusive development through promoting community involvement
 - ❖ Commit to the participation of all persons with diversities;
 - ❖ Establish non-discriminatory and effective communication with all people with diverse back ground;
 - ❖ Tap into local networks, culture and indigenous experiences of inclusiveness;
 - ❖ Use all possible communication channel including sign language for deaf people.
